GLUCOPLATE

GlucoPlate: Precision Nutrition for a Stable Life.

Integrating Nutrition, Budget, and Biometrics for the Modern Diabetic.

Daily plan

Within budget and GL cap

Budget (sample)

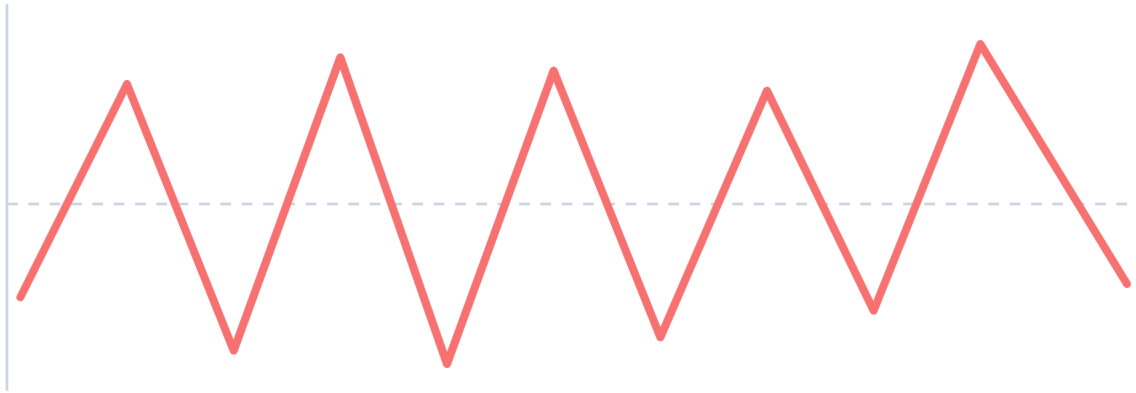

KES 540 of 600

Weight

Trending toward target

THE PAIN • THE FEAR OF THE SPIKE

Blood sugar swings, and the budget makes it harder to fix.

Illustrative pattern of spikes and crashes, not patient data.

Low-GI foods are hard to find on a tight budget.

Under pressure, people make poor food choices.

The result: dangerous spikes and crashes.

SCIENCE MADE SIMPLE

Two simple ideas keep blood sugar steady.

Glycemic Index (GI)

The speed limit of sugar.

How fast a food raises your blood glucose.

Low: slow | Medium | High: fast

Glycemic Load (GL)

The total amount of sugar.

Speed plus portion size: how much sugar is actually in the meal you eat.

Control both, and you stop the spikes and stay in the Green Zone.

THE SOLUTION • USER-DRIVEN OPTIMIZER

Your foods, your budget, your limits.

User input

Preferred local foods and a daily budget, with prices the patient enters.

Budget-safe GI optimizer

Stays within budget and each meal's glycemic-load cap.

Optimal daily plan

Lowest total glycemic load that fits the money available.

Ties go to variety, then to lower carbohydrate.

THE KENYAN REALITY • NAIROBI

Juma, Nairobi: a full day of eating for KES 540 of 600.

Patient

Juma, Nairobi

Daily budget: **KES 600**

His bucket of local foods

Brown ugali • Managu • Tilapia • Avocado

Generated day plan (illustrative)

Breakfast • boiled egg with a small portion of brown ugali

Lunch • steamed managu with grilled tilapia

Dinner • sukuma wiki with avocado

GI badge

Low to medium

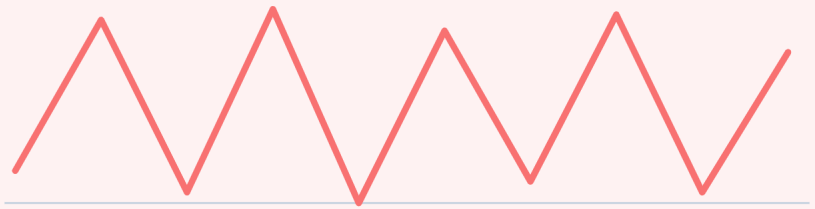

Costs are illustrative examples, not market prices. GI is shown as bands only.

THE PROOF • STABILITY

The goal: no spikes, no crashes, just steady energy.

Before GlucoPlate

Peaks and valleys after meals.

After GlucoPlate

A smoother, steadier curve.

The target: stability, with no spikes and no crashes.

Curves are illustrative shapes of the goal. They are not clinical results. Measured proof comes from a pilot with patients and clinicians.

THE 360° HEALTH HUB

Weight, assistant, and weekly trends in one place.

Weight tracker (illustrative)

Trending down

AI assistant (sample)

Hi Juma! I've found a cheaper, lower-GI substitute for your lunch that fits your 600 KES budget.

Days in the Green Zone (proposed)

5 of 7 days

Weight data, weekly bars, and assistant replies are sample content. The assistant supports the patient's care team and does not replace it.

THE VISION

Diabetes is a lifelong journey. It shouldn't be a lifelong struggle.

Join us in making stability accessible to every patient, regardless of their budget.

Next step: a clinical pilot with patients and clinicians.
